Definitions

| | |
|------------------------|--|
| Compounding | Removal of scratches or imperfections felt by hand (i.e. water spots, buffing swirl marks) by removal of a thin layer of dull paint caused by environmental exposure. |
| Polishing | Restoring the optical clarity (removing haziness) and bringing out the "WOW" in your paint. Removing spider webbing, fine surface scratches and imperfections. |
| Wax and Sealant | Wax adds a sacrificial layer on the paint surface to protect against exposure to environmental contamination. A sealant bonds to the paint to protect against exposure to environmental contamination. Both enhances your paint's "Wet" look and distinction of image (DOI). |

* The Ultimate Cleaner can be used to remove tire and autocross cone marks from wheels.

** The Purifying Prep Clay can be used to remove paint overspray, tree sap build up, bugs, brake dust, industrial contaminants/fallout and other paint surface contaminants.
